I. ADMINISTRATION

(Tables 1 - 6)

The Medical and Health Department is responsible for administering services which provide medical and health care for the community of Hong Kong. To provide a good quality service, a staff establishment of 15,945 of which 936 were medical staff of all grades and 6,006 were nursing staff was needed in 1977.

The Department's expenditure for the financial year was \$763 million which represented 8.5% of the total public expenditure of Hong Kong.

There are six statutory councils and boards to deal with the registration of doctors, dentists, nurses and midwives and to handle matters relating to pharmacy and poisons and radiation.

The regionalization of medical and health services was implemented in April 1977. The main objective is to put into the most effective use of the facilities and resources available in each region and to provide a high standard service. The objective has largely been achieved.

II. VITAL STATISTICS

(Tables 7 - 20)

General

The estimated mid-year population of Hong Kong in 1977 was 4.51 million, an increase of 1.6% compared with the previous year. About 29% were under 15, and 5.7% were aged 65 years and over. The general state of health was favourable and reflected the rapid development of medical and health services.

Birth Rate

The crude birth rate was 17.5 per thousand population, as compared with 17.2 for 1976.

Infant Mortality Rate

The infant mortality rate was 13.9 per thousand live births and is now at a level lower than many European and American countries. This decline was due partly to the development of maternal and child health services and partly to the improvement in social and environmental conditions. The major causes of infant deaths were congenital anomalies, prematurity, asphyxia and pneumonia.

Figure 1 shows the infant and neo-natal mortality rates for the past 16 years.

Acc. No.	5683
Date	12 FEB 1979

PLEASE RETURN TO
PUBLIC RECORDS OFFICE
OF HONG KONG
REFERENCE LIBRARY

Maternal Mortality

The rate for 1977 was 0.16 per thousand total births, compared with 0.18 in the previous year. The main causes of maternal mortality were haemorrhages and abortions.

General Mortality

The crude death rate was 5.2 per thousand population. Figure 2 shows the age and sex specific death rates in 1977.

The leading causes of death were malignant neoplasms, heart diseases, cerebrovascular diseases, pneumonia and accidents. The common malignancies were cancers of the lung, liver, stomach and nasopharynx.

III. COMMUNICABLE DISEASES

(Tables 21 - 25)

The total number of notifications of communicable diseases during 1977 was 12,087. Tuberculosis comprised 59.5% of the total.

The incidence of major infectious diseases in the past 16 years is shown in Figure 3.

Enteric Fever

The number of cases reported decreased from 500 in 1976 to 389 in 1977. 30% of the cases occurred in young adults aged 15-24 years. A total of 13 typhoid carriers were detected on investigation.

Bacillary Dysentery

The number of cases slightly decreased from 356 in 1976 to 322 in 1977. 22% of the cases occurred in children under five. A total of 94 carriers were detected on investigation.

Measles

A total of 1,537 notifications with 12 deaths were reported. Measles was at one time very prevalent among children under five. Since the introduction of anti-measles vaccination in 1967 the incidence has been reduced drastically and the pattern of infection is no longer biennial. The monthly notifications in the past 16 years are shown in Figure 4.

Viral Hepatitis

A total of 1,008 cases with 42 deaths were notified. 27% of the cases were in the age group 15-24 years and the male to female ratio was 2.3 to 1.

Food Poisoning

A total of 213 outbreaks were reported with 555 persons affected. There were no major outbreaks.

Malaria

Practically all 40 cases were imported.

Influenza

There were three minor outbreaks of influenza in 1977. The first outbreak was in April - June with the peak incidence in the middle of May. The causative agent was A/Victoria/3/75 (H3N2) which has been prevalent in Hong Kong since April 1975. The second outbreak occurred in June - August and was caused by influenza B/Hong Kong/5/72 virus. The third outbreak involving mainly children and young adults started in late November and reached its peak in December. The causative agent was influenza A(H1N1) subtype; it was antigenically similar to A/USSR/90/77 virus. The subtype A(H1N1) virus had been prevalent worldwide in the period 1947 - 1956.

Rubella

An outbreak of rubella occurred in the spring of 1977. It commenced in early March and quickly rose to peak incidence in April. Thereafter, it gradually declined in the following three months. The infection affected mainly children and young adults. Preparation is in hand to offer rubella vaccination to young girls and women in the reproductive age group as from September, 1978.

IV. HEALTH SERVICES

(Tables 26 - 40)

Tuberculosis and Chest Service

There was a further fall in the tuberculosis death rate from 12.8 in 1976 to 11.8 per 100,000 population. The notification rate dropped from 178 per 100,000 population in 1976 to 159 in 1977. Figures 5 and 6 show the mortality and notification rates by age and sex in 1967 and 1977. 3.6% of the

cases notified in 1977 were under the age of 15.

Attendances at government chest clinics remained at the high level of 1.16 million.

During the year 98% of the newborn were given BCG. This is probably the highest coverage rate in the world. BCG vaccination was introduced in 1952. The resulting decline in infant mortality from tuberculosis is shown in Figure 7.

Social Hygiene Service

The number of venereal diseases treated was 4,808 as compared with 6,340 in the previous year, a decrease of 24%. Approximately 4% of the cases came from the teenage group. The common venereal diseases were gonorrhoea (44%), non-gonococcal urethritis (19%) and syphilis (19%).

0.49% of the expectant mothers showed an initially positive serology but only 0.29% were found to be suffering from syphilis.

Figures 8 and 9 show the incidence of syphilis and gonorrhoea from 1963 to 1977.

New cases of leprosy numbered 73, representing a rate of 1.6 per 100,000 population.

Family Health Service

The Family Health Service provides a comprehensive health care programme for women of child bearing age and children from birth to five years. For maternal and child service, there are a total of 38 centres, 23 of which are full-time and the rest are part-time centres operating on a sessional basis. Family planning service is available in 41 centres, 5 of which are full-time while the rest are operated by mobile teams several times a week.

In 1977, over 90% of all newborns were brought to a centre for attention and advice on at least one occasion. Approximately 1% of new attendances were found to have abnormalities, such as congenital defects or effects of prematurity.

The total attendance was 1.61 million, an increase of 2% over that of 1976.

Industrial Health Service

There were 448 cases of decompression sickness and 2 cases of contact dermatitis notified. Among the non-notifiable occupational diseases, 219 cases of silicosis and 25 cases of gassing were recorded.

A total of 2,925 tests were carried out on air samples taken from working and general environment for monitoring purposes. 430 surveys were done in connection with standards of thermal comfort, ventilation, noise and lighting in the working environment. For those engaged in radiation, diving and compressed air work, a total of 1,808 clinical examinations were performed.

There were 81,973 occupational injuries. In addition 223 occupational deaths were recorded. Industrial health officers participated in medical boards to assess the disability of 20,519 injured workers.

Port Health Service

The Port Health Service continued to undertake the responsibility of enforcing control measures to prevent the introduction of diseases subject to the International Health Regulations into Hong Kong by sea, land and air.

The Service also continued to fulfil its duties in the supervision of the general sanitation of Port and Airport, maintenance of vaccination centres, maintenance of a medical clinic at the Airport and compilation and dissemination of epidemiological information by regular communication with the World Health Organisation.

In 1977, 4,294 ships arriving in Hong Kong were cleared. The number of vaccinations given at port health inoculation centres totalled 106,054.

V. HOSPITAL SERVICES

(Tables 41 - 53)

At the end of 1977, a total of 19,779 hospital beds were available in Hong Kong, excluding those maintained by the armed forces. These were made up as follows: 9,181 government, 8,199 government-assisted and 2,399 private, giving a ratio of 4.4 beds per 1,000 population.

To ensure the efficient use of hospital beds and medical facilities, the services have been regionalised since April 1977 with the whole of Hong Kong divided into four regions. The objective is to bring about a better appreciation of the medical and health needs of each of the main population centres.

The results of regionalisation have so far been encouraging. Although the demand for services at the two regional hospitals - Queen Elizabeth Hospital and Queen Mary Hospital - still remains high, congestion has largely been relieved and bed occupancy in the various district hospitals has increased significantly.

The Princess Margaret Hospital became fully operational in April 1977. The Hospital serves mainly the West New Territories and has contributed towards easing the demand for services at the Queen Elizabeth Hospital. The Department's first cornea transplant unit was set up at the Princess Margaret Hospital.

Casualty attendances at government hospitals totalled 505,603, an increase of 17% compared with the previous year; the number of in-patients treated was 281,390, an increase of 9%.

VI. CLINIC SERVICES

(Tables 54 - 64)

General and Specialist Out-patient

Pressure remained heavy throughout the year on all 52 general out-patient clinics and also on specialist clinics. The general out-patient attendance was 4.17 million, a drop of 4% compared with the previous year while specialist attendance was 5.47 million, an increase of 3%. Trends of the demand for services during the past ten years are shown in Figure 11. More clinic sessions have been operating on week-day evenings and on Sundays and public holidays at various selected clinics to meet the growing demand since June, 1977.

Psychiatry

New attendances at government psychiatric clinics totalled 3,315, an increase of 1% over that of 1976. Total attendances amounted to 135,700, a decrease of 0.5% compared with the previous year.

The concept of treating patients in day and out-patient centres has proved to be successful. Four day-patient centres supplement the in-patient services at the hospitals. During the year 488 day patients were treated.

Ophthalmology

There are two main out-patient centres and a number of part-time clinics. During the year the total attendance was 268,209, a decrease of 0.4% as compared with the previous year. The number of persons first registered as blind was 572, compared with 687 in the previous year.

Ear, Nose and Throat

The service is regionalised into the Hong Kong and outlying islands division based at Queen Mary Hospital and the Kowloon and New Territories

division based at Queen Elizabeth Hospital. During 1977, total outpatient attendance was 61,779, an increase of 6% compared with the previous year.

Child Assessment

The Arran Street Child Assessment and Hearing Aid Clinic became operational in October 1977. It provides comprehensive assessment of handicapped children under the age of 12.

Dental Service

The dental service operates 31 clinics. A total of 285,695 attendances were recorded, an increase of 4% as compared with the previous year.

District Midwifery

12.2% of births were delivered at government maternity homes and 4.1% in private maternity homes. These figures show a decrease compared with the previous year as more expectant mothers favour to attend hospitals for confinement.

School Medical Service

On 31st March 1978 the number of pupils participating was 111,494 from 747 schools, compared with 106,193 from 756 schools on the same date in the previous year. Medical practitioners taking part in the scheme numbered 202 compared with 208.

Registration of Clinics

There were 82 registered static clinics, two registered mobile clinics in the charge of registered medical practitioners, and 320 clinics registered with exemption making a total of 404 on 31st March 1978.

VII. SPECIAL SERVICES

(Tables 65 - 71)

Pathology

The Institute of Pathology operates a number of clinical and public health laboratories, blood banks and mortuaries. During the year the total number of examinations undertaken by the Institute of Pathology was 3.90 million, an increase of 24% compared with the previous year; this excludes tests done for Queen Mary Hospital which is served by the Department of

Pathology of the Hong Kong University.

In the blood banks 55,374 pints of blood were received, 54,902 pints of which were from the collecting centres of the Hong Kong Red Cross.

An imported case of human rabies was detected in April 1977. Virological examination of brain specimens from 52 domestic animals revealed no rabies infection.

868 (29%) of 3,006 clinical cases of viral hepatitis and 1,793 (6%) of 28,491 blood donors were found positive for hepatitis B surface antigen.

Radiology and Oncology

The Institute of Radiology and Oncology comprises three main divisions, radiodiagnostic, radiotherapy and radiation physics.

The radiodiagnostic division provides an X-ray diagnostic service. In all, 28 institutions and 3 mobile chest radiography units were in operation with a total of 755,457 examinations. This represented a decrease of about 6% compared with last year, which was largely attributable to the drop in chest X-ray examinations at the survey centres, chest clinics and mobile radiography vans.

The radiotherapy division based at Queen Elizabeth and Queen Mary Hospitals is the main radiotherapy centre in Hong Kong. It treats more than 90% of all local patients requiring radiotherapy and also some overseas patients. The total number of patients with malignant diseases treated was 3,798, an increase of 7% compared with the previous year.

The radiation physics division provides a film-badge radiation monitoring and protection service for the whole of Hong Kong. During 1977, the film-badge service covered 1,277 radiation workers in various hospitals, X-ray laboratories and industrial undertakings.

Anaesthesia

The anaesthetic service manned 230 operating sessions a week and 7 emergency operating theatres on a 24-hour basis for emergencies. A total of 57,401 operations were done under anaesthesia in 1977, an increase of 0.5% compared with 1976.

Forensic Pathology

The Forensic Pathology Service advises and works in close association with the Royal Hong Kong Police Force on the medical aspects of criminology. This includes all homicidal deaths, deaths under suspicious circumstances, sexual offences, and other offences against the person. The professional staff

dealt with a total of 677 autopsies, 884 clinical examinations and blood groupings and 2,947 laboratory examinations in 1977.

Government Laboratory

The Government Laboratory provides chemical and related scientific services for Government Departments. There are two divisions, general and forensic. The total number of items examined in 1977 was 74,647, a decrease of 5% compared with the previous year.

VIII. OTHER SERVICES

(Tables 72 - 77)

Nursing

The total number of staff in the nursing and allied grades is 6,006 who undertake duties in all government hospitals and clinics as well as in the public health services. The slight increase in establishment of 3% is due to the opening of the East Kowloon Polyclinic Stage I in July 1977, and the South Kwai Chung Polyclinic Stage II becoming fully operational in August, 1977.

In the medical division there are five grades; Registered Nurse (General), Registered Nurse (Psy.), Enrolled Nurse (General), Enrolled Nurse (Psy.) and Midwives, whilst in the health division there are another three grades; Health Visitors, Health Auxiliaries and Inoculators. Seven of these grades have their own source of training schools and at the same time local Chinese residents who have received training in the United Kingdom may be recruited through the Hong Kong Government Office in London.

The Nursing Services benefited by the return of nursing personnel who had successfully completed overseas courses of instruction in nursing administration, nursing education, both in the general and psychiatric areas, community health nursing (psychiatric) and ophthalmic nursing.

Pharmaceutical Service

The pharmaceutical service meets the requirements for drugs, dressings, surgical instruments and hospital sundries of all government hospitals, clinics and health centres. Items are also supplied to government-assisted institutions on requests. It has a staff of 252 of all grades.

The service also supervises the enforcement of the law pertaining to dangerous drugs, poisons and antibiotics, as governed by the respective ordinances. During the year, 5,793 premises were inspected and 76 prosecutions were instituted.

Medical Social Service

The rapid expansion of the medical and health services and the increasing emphasis on rehabilitation continued to make heavy demands on the medical social service. There were six divisions : Hong Kong, Kowloon, New Territories, mental health, chest and special skin, and narcotics. The total number of cases handled was 68,651, an increase of 36% compared with the previous year. Services rendered included financial assistance, compassionate rehousing, counselling, placement in institutions and job-placement.

Physiotherapy

The total number of staff in the physiotherapy service is 124. In 1977, 105,562 patients were given a total of 1,051,328 treatments, an increase of approximately 21% in terms of patients and 24% in terms of treatments in comparison with 1976.

Occupational Therapy

There were altogether 11 units in the service which has a staff of 96. In 1977, 12,112 patients were given a total of 655,528 treatments, a slight decrease of 3% in terms of patients and 4% in terms of treatments in comparison with 1976.

Prosthetic-Orthotic Service

A third Prosthetic Centre at South Kwai Chung Polyclinic was opened during the year. The number of patients treated during 1977 was 7,732 with a total attendance of 16,030.

Narcotics and Drugs

The Narcotics and Drug Administration is responsible for undertaking various activities in the treatment and rehabilitation of drug addicts, research and health education in the danger of drug addiction.

Four methadone maintenance centres and 17 methadone detoxification centres for out-patient were in operation to cater for the demand for treatment facilities.

During 1977, the number of new admissions to the methadone maintenance and methadone detoxification centres were 1,616 and 3,536 respectively.

IX. TRAINING PROGRAMMES

(Tables 78 - 80)

Medical Staff

Higher professional examinations were held in Hong Kong in 1977 by the Royal College of Physicians, the Royal College of Obstetricians and Gynaecologists, the Royal Australasian College of Surgeons and the Royal Australasian College of Radiologists.

During the year 1977/78, 32 doctors went abroad to further their studies in their respective fields; 10 of whom were funded by the Government.

Dental Staff

In the year, four scholarships were granted to local scholars to study dentistry at the Universities of Sydney and Singapore and nine graduates returned to Hong Kong. So far 87 scholars out of the 111 scholarships awarded in the past years have completed their professional training and returned.

Nursing Staff

750 general and 142 psychiatric student nurses were in training, undergoing three-year courses leading to Registration with the Nursing Board of Hong Kong, in the three respective Government Hospitals' Schools of Nursing. For the two-year courses leading to Enrolment with the Nursing Board of Hong Kong, there were 174 general and 91 psychiatric pupil nurses.

There were 103 registered nurses undergoing a one-year post-basic training in midwifery, leading to registration with the Midwives Board of Hong Kong and 4 registered nurses commenced an 18-month post-basic course in Psychiatric Nursing, leading to Registration (Psy.) with the Nursing Board of Hong Kong.

15 registered nurses commenced a 9-month course in public health nursing and 10 enrolled nurses underwent a 6-month course in basic health procedures.

In-service training courses were given in specialty subjects including geriatric nursing, orthopaedic nursing, paediatric nursing, psychiatric nursing, midwifery refresher course, and the nursing management of surgical and medical emergencies. In addition the newly designed "developmental screening" 3-month course for registered nurses commenced in January 1978 and the first group of 20 candidates successfully completed this course in March, 1978.

Paramedical Staff

There were 46 student dispensers, 48 student medical laboratory technicians, 38 student physiotherapists and 42 student radiographers undergoing three-year courses of training in the respective fields. During the year 7 student dispensers, 26 student medical laboratory technicians, 12 student physiotherapists and 14 student radiographers passed their final examinations.

Progress on localisation

The Department is one of the most localised Government departments. Overseas recruitment is largely restricted to the areas where there is limited or no local manpower resource available. For example, there was a need to recruit overseas physiotherapists and occupational therapists. However the Polytechnic will take over the theoretical training with effect from September 1978 in these two disciplines which should boost the local output in 3 years' time, and ultimately reduce or eliminate the need to recruit overseas. An increase in the number of Dental Officer posts also meant some overseas recruitment. The setting up of the Hong Kong University Dental School should eliminate the need for overseas Dental Officers in due course.

The other area with limited overseas recruitment was in the Medical and Health Officer grade, as it was difficult or impossible to find suitable local doctors willing to serve in some particular out-posts.

X. MEDICAL DEVELOPMENT

(Table 81)

A White Paper entitled "The Further Development of Medical and Health Services in Hong Kong" published in 1974 provides a blue print for the future development of the services in the next 10 years. Development is reviewed annually. The last review was completed in 1977. A 10-year Medical Development Programme containing proposals for the further development of the services has been prepared.

During the year, the East Kowloon Polyclinic (Stage I) and a child assessment clinic were opened.

Some 1,100 candidates sat for the Licentiate Examination for unregistrable doctors conducted by the Licentiate Committee of the Medical Council of Hong Kong. Of these, 112 candidates passed all three parts of the Examination. Successful candidates are undergoing a period of externship covering 18 months which began in September 1977.

A Central Health Education Unit was being established. The Unit would serve as a co-ordinating and advisory unit working closely with interested departments and voluntary organizations in promoting health education work.

Building work continued during the year on the new 1336-bed Psychiatric Wing of the Princess Margaret Hospital and the 576-bed Caritas Medical Centre extension. Construction work for the 9-storey MacLehose Dental Centre containing the Dental Therapist Training School and a School Children's Dental Clinic is nearing completion.

The Medical School at the Chinese University of Hong Kong (CUHK) and the Dental School at the University of Hong Kong will be established by 1980. Planning work has already commenced on the 1400-bed Sha Tin Hospital which will be the regional hospital for the Eastern New Territories and the teaching hospital for the second medical school at CUHK. Work on the construction of the Dental Teaching Clinic, which will provide clinical teaching facilities for the dental students of the Dental School, is expected to commence in 1978.

Commencing from April 1977, six voluntary organizations providing community nursing services are being assisted financially by the government with a view to evaluating the contribution of this service to the overall medical and health services in Hong Kong.

In May 1977, the Government approved a capital subvention to assist the Hong Kong Heart Foundation and the Hong Kong Anti-Tuberculosis and Thoracic Diseases Association towards the conversion of the Grantham Hospital into a major cardiothoracic centre.

On 27th February, 1978, His Excellency the Governor, Sir Murray MacLehose, laid the foundation stone for the Fanling Hospital Extension. The project will be carried out in two stages over the next three years. The aim of the extension and improvement is to bring the existing hospital to a district hospital capability.

In October 1977, a White Paper on the Further Development of Rehabilitation Services in Hong Kong over the next ten years was published. The objectives and targets listed in the Paper, and the progress of implementation will be reviewed annually.

A Green Paper on the Services for the Elderly was published in 1977. Public comments on the proposals in the Green Paper are being examined. It is envisaged that a White Paper on the future development of the services for the elderly will be prepared in 1978.

XI. ACKNOWLEDGEMENTS

I would like to place on record my sincere appreciation to the staff at all levels for their invaluable help in dealing with the many problems large and small which the Department had to face in the year under review. In spite of the fact that they often had to work under much pressure and difficult circumstances, all carried out their duties efficiently and effectively, and with true devotion and dedication. I am most grateful to them all for their unflinching support throughout the year.

The Department received every assistance and co-operation from other Government departments, voluntary agencies, the press, the radio and television networks.

I also wish to place on record my thanks to the many public spirited persons who have devoted so much of their time in order to serve on statutory boards, advisory committees, working parties, and in voluntary agencies dealing with the many aspects of medical and health services in Hong Kong.

Finally, I acknowledge with thanks the contributions of private individuals, and local and overseas organisations who have assisted the Department in providing facilities for those in need of medical care.

K. L. THONG
